

LOCAL VISIBILITY INFRASTRUCTURE

Bierman Autism Centers Proof-Layer System

A validated local page architecture for a 33-location ABA therapy network — built to prove the system before touching production.

PROJECT	STATUS	DATE
Ramsey, NJ — Pilot Location	Proof Layer Complete	May 2026

CONTEXT

Why This Exists

THE PROBLEM

01 33 locations, zero owned local pages

Every location has a GBP profile. None has a dedicated, schema-structured landing page on biermanautism.com.

02 GBP drives actions — none are tracked

Calls, directions, and appointment clicks from GBP profiles generate zero attribution data. Only website clicks reach GA4.

03 No center-level search signal

Searches for "ABA therapy in Ramsey NJ" or "autism center near me" have no owned page to land on. Traffic goes to the GBP or a competitor.

THE OPPORTUNITY

▶ Every location is a search entry point

33 city-level pages = 33 opportunities to rank for high-intent local queries. Each page compounds the network's search footprint.

▶ Schema-structured pages unlock rich results

A single validated page architecture — deployed across all 33 locations — can generate Review Snippets, FAQ, Local Business, and Video rich results at scale.

▶ Proof before production

The proof layer validates the full system — schema, content, tracking, GBP alignment — on a noindexed page before a single change touches the live site.

The Conversion Gap

GBP drives 4 conversion actions. Only 1 is tracked. The other 3 are invisible to GA4, HubSpot, and ad platforms.

- **Action → Intake:** Phone calls from GBP go to CallRail — if CallRail is configured. Unknown at Ramsey.

- **Intake → Deal:** Appointment URL from GBP may go to a third-party scheduler. HubSpot connection unconfirmed.

- **Directions:** GBP directions clicks go directly to Google Maps. Zero attribution. No UTM. No event.

What We Built

NOINDEXED

/ ZERO TRACKING

/ STANDALONE

01 Noindexed — production is untouched

The proof layer is invisible to Google. It cannot affect rankings, indexing, or the live site in any way. Every test runs in isolation.

02 Zero tracking — no data collection

No GA4. No GTM. No pixels. No third-party scripts. The page collects nothing. Safe for internal review, agency review, and client review.

03 Validates the full architecture

Schema, content, GBP alignment, review integration, clinical trust signals, and Rich Results eligibility — all confirmed before a single change touches production.

AGGREGATE RATING

7

REVIEW SNIPPETS

SCHEMA RULES APPLIED

reviewBody required

Visible on-page text must match schema reviewBody exactly. Image-only reviews are not eligible.

itemReviewed → LocalBusiness @id

Every Review node points to the Ramsey MedicalClinic entity via @id cross-reference.

No microdata conflict

JSON-LD is the sole schema source. All itemScope/itemProp attributes removed from DOM to prevent duplicate invalid nodes.

No diagnosis or child name

HIPAA-adjacent caution: no PHI in schema or visible review text. Reviewer names only.

★★★★★ 8 weeks ago

If I could give this center 10 stars, I would!! My son has been here for a little over a year, and I am beyond thankful for all the help he has received. I would like to thank all of the therapists, aides, and clinical directors who contributed to my son's progress and positive evolution. I would highly recommend this center to anyone who is looking to get their child more support with therapies. It has personally been one of the best decisions I've made for my son's ADS journey.

Amazing experience at the Reptile Encounter was amazing and fun! Our son loved seeing and touching all the reptiles. Such a great family event!

Posted on Google

GENERATED CARD — Nancy Passano

Cards are **native HTML/CSS React components** — not images. Reviewer name, star rating, and review text are DOM-visible text, directly matching the **reviewBody** in each schema Review node. No edit/delete icons. No Google UI chrome.

The GBP Attribution Gap

GBP drives 4 conversion actions.
Only 1 reaches GA4.

Every Bierman GBP profile generates website clicks, phone calls, direction requests, and appointment URL clicks. The tracking infrastructure only captures one of these four paths.

- **Website Click**
TRACKED — GA4
- **Phone Call**
GAP — CALLRAIL UNCONFIRMED
- **Directions**
GAP — GOOGLE MAPS, NO UTM
- **Appointment URL**
GAP — HUBSPOT CONNECTION UNKNOWN

Business impact: An estimated 6,419 annual calls across the network may be unattributed. Source: SEO Business Impact Audit, May 2026.

Data Layer Architecture

Safe tracking taxonomy — center-level context preserved across all platforms. No PHI. No diagnosis. No child name.

ALLOWED	8 Tracked Events
✓	page_view Standard GA4 event
✓	cta_click Get Started / Schedule buttons
✓	phone_click tel: link click
✓	directions_click Get Directions link
✓	video_play YouTube embed interaction
✓	insurance_expand Insurance section interaction
✓	faq_expand Intake FAQ accordion
✓	scroll_depth 25 / 50 / 75 / 100%

ALLOWED	6 Parameters
■	location_id e.g. ramsey-nj
■	location_name e.g. Bierman Ramsey
■	location_state e.g. NJ
■	page_type location-page
■	cta_label Button text only
■	content_section hero / faq / reviews / etc.

DISALLOWED	6 Blocked Parameters
⚠	child_name No PII — HIPAA-adjacent
⚠	diagnosis No health condition data
⚠	age No child age in events
⚠	insurance_carrier No health insurance data
⚠	form_field_value No intake form contents
⚠	user_id (PII) No email, phone, or name

Clinical Trust Signals

WHY CREDENTIALS ARE SEARCH-RELEVANT

01 Families search by credential, not just location

Queries like "BCBA-D near me" and "board certified behavior analyst Ramsey NJ" are high-intent, low-competition. A Person schema node with credential markup makes those queries ownable.

02 Schema Person nodes add entity authority

Two Person nodes (BCBA + SLP) are cross-referenced to the Ramsey LocalBusiness entity. This strengthens the location's entity graph and signals clinical credibility to Google's Knowledge Graph.

03 Headshots pending client approval

Clinical staff headshots are placeholders in the proof layer. Production deployment requires explicit approval from Bierman for each staff member's image and credential display.

Brooklyn Park, MN	gbp_status	GBP profile exists but verification status unclear. Directions data available; phone unconfirmed.	OPEN
Broad Ripple, IN	gbp_url	Possible duplicate GBP listing alongside Indianapolis profile. Requires GBP audit to confirm canonical listing.	OPEN

URL Architecture

RECOMMENDED PATTERN

biermanautism.com/locations/nj/ramsey/

▲ ▲ ▲ ▲
DOMAIN HUB STATE CITY

CURRENT Flat Slugs

/locations/ramsey-nj/

- ⚠️ **No state-level disambiguation**
City names repeat across states. "Ramsey" exists in NJ and other states. Flat slugs can't distinguish them.
- ⚠️ **No hub page architecture**
A flat structure can't support /locations/nj/ as a state hub page with internal links to all NJ locations.
- ⚠️ **Weak internal linking signal**
No hierarchical URL means no topical clustering signal for Google. Each location page is an island.

RECOMMENDED State / City Hierarchy

/locations/nj/ramsey/

- ✓ **State-level disambiguation**
NJ, MA, IN, OH — each state becomes a URL segment. Scales cleanly to 14 states without slug collisions.
- ✓ **Hub page architecture enabled**
/locations/nj/ becomes a state hub page linking to all NJ locations. Topical authority compounds across the cluster.
- ✓ **Scales to 33 locations**
Pattern is consistent and machine-generatable from the location data matrix. No manual slug management.

MIGRATION 3-Step Path

No redirects until new pages rank

- 1 Build new pages first**
New /locations/nj/ramsey/ pages go live. Old /locations/ramsey-nj/ pages remain untouched. No traffic risk.
- 2 Validate rankings before redirecting**
Wait for new pages to index and accumulate impressions in GSC. Confirm no ranking regression before 301s.
- 3 301 redirect old slugs**
Once new pages are stable, redirect old slugs to new URLs. Update GBP website URLs, sitemaps, and internal links in one pass.

PENDING

6 PILOT TASKS

1	Page Build Location page with all 11 content sections. Ramsey complete. Piscataway: 9-variable swap from template.	RAMSEY DONE
2	GBP Alignment NAP match, phone verification, map embed, appointment URL, directions link.	RAMSEY DONE
3	Schema Validation Rich Results Test: 12 valid items, 0 invalid, 6 rich result groups. JSON-LD only, no microdata conflict.	RAMSEY DONE
4	Review Integration 6 public GBP reviews as native HTML/CSS cards. reviewBody in DOM and schema. No PHI.	RAMSEY DONE
5	Tracking Setup GTM data layer, GA4 events, CallRail confirmation, HubSpot hidden fields, UTM parameters on GBP links.	BOTH PENDING
6	Baseline Measurement GSC impressions, GA4 organic sessions, GBP actions (calls, directions, website clicks) — 30-day baseline before production.	BOTH PENDING

Week 1

Ramsey proof layer complete

Week 2

Piscataway data confirmed + page built

Week 3

Tracking setup + GBP UTMs live

Week 4

Baseline measurement + pilot report

8-Phase Roadmap

01 DONE

Ramsey Proof Layer

- Full location page built
- 26-node schema, 12 valid Rich Results
- 19 docs files + evidence trail

02 ACTIVE

Piscataway Build

- 9-variable swap from Ramsey template
- GBP reviews + schema
- Blocked: phone + address confirm

03 PLANNED

NJ Cluster

- 4 NJ locations total
- State hub page: /locations/nj/
- Internal linking between locations

04 PLANNED

Northeast Expansion

- MA, CT, NH, PA locations
- State hub pages per market
- Baseline measurement comparison

05 PLANNED

Full Network (33)

- All 33 locations across 14 states
- National /locations/ hub page
- Systematic GBP alignment

06 PLANNED

Attribution Layer

- GTM + GA4 center-level events
- CallRail integration
- HubSpot hidden field mapping

07 PLANNED

AEO / Answer Engine

- FAQ expansion per location
- Speakable schema for voice
- AI answer engine visibility

08 PLANNED

Acquisition Readiness

- Full repo documentation
- Operating system handoff
- Buyer-ready evidence trail

VALID RICH RESULTS

11

EVIDENCE FILES

The system is the asset.

A buyer evaluating Bierman doesn't just see a website. They see a **repeatable, documented, scalable local SEO architecture** — with schema validation, attribution design, and a 33-location data matrix already built.

The proof layer demonstrates that this system can be deployed to any location in the network from a single template with **9 variable swaps** and a validated schema in under a week.

WHAT A BUYER CAN EVALUATE FROM THIS REPO

DOCUMENT / ARTIFACT	WHAT IT PROVES	RELEVANCE
Location Data Matrix v3 docs/evidence/source-artifacts/	33 locations, 14 states, all data fields, known discrepancies documented and tracked	HIGH
Schema Strategy docs/SCHEMA_STRATEGY.md	26-node entity graph, 6 Rich Result groups, dual-schema conflict resolved, validation log	HIGH
URL Architecture docs/URL_STRATEGY.md	State/city hierarchy, hub page architecture, migration path without traffic risk	HIGH
Data Layer Spec docs/DATA_LAYER_SPEC.md	Safe tracking taxonomy, 8 events, 6 allowed params, 6 blocked params, HIPAA-adjacent compliance	HIGH
Operating System docs/OPERATING_SYSTEM.md	10 documented workflows, ownership boundaries, deliverables vs. internal methods	HIGH
Evidence Trail (11 files) docs/evidence/	Every architectural decision traced to a source. Audit findings, GSC data, GBP findings, decision log.	HIGH
Acquisition Readiness docs/ACQUISITION_READINESS.md	5 documented production gaps, value framing, what transfers with the repo	CONTEXT

NOT TRANSFERRED

Internal agent skills, orchestration methods, and automation workflows are not transferred unless separately agreed. The repo contains documentation, architecture, and validated deliverables — not the production systems used to generate them.

Next Steps

01

CRITICAL

Confirm Ramsey Phone Number

Three conflicting values exist across source documents:

- (201) 596-8104 — proof layer current
- (201) 308-3735 — GBP review report
- (201) 928-5245 — directions report

One call to the Ramsey front desk resolves this. The confirmed number must be updated in the page, schema, and GBP listing before production.

OWNER: BIERMAN OPS / FRONT DESK

02

CRITICAL

Confirm Piscataway Address + Phone

Two conflicting street addresses and two conflicting phone numbers exist for the Piscataway location across the GBP export and location matrix.

This is the only blocker preventing the Piscataway page build from starting. Once confirmed, the build is a 9-variable swap from the Ramsey template — estimated 1 session.

OWNER: BIERMAN OPS / LOCATION MANAGER

03

HIGH PRIORITY

Approve Content for Production

Before any page goes live on biermanautism.com, explicit approval is required for:

- Clinical staff headshots** — currently placeholders in the proof layer. Each staff member must approve their image and credential display.
- Review content** — 6 GBP reviews are used. Confirm public-facing use is approved by Bierman marketing.

OWNER: BIERMAN MARKETING / CLINICAL LEADERSHIP
